```

NOTE: This is a 'working draft' sequence. It currently consists of 51 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                The sequence represents the coding sequence of cardiac enhancer mCsx/Nkx2.5 homology domains Al + A2 and intervening sequence. The nucleic acid is useful for specifically expressing a gene in a cardiac cell, as an earlier marker of cardiomyocyte induction, e.g. for optimising cardiomyocyte induction. Genes expressed in the cardiac specific manner are useful for the targeted expression of genes encoding therapeutic proteins for the treatment of damaged heart tissue. Cardiac
                                                                                                                                               DNA encoding mCsx/Nkx2.5 homology domains A1 + A2, and intervening DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              180

nucleic acid is useful for specifically expressing a gene in a cardiac cell, as an earlier marker of cardiomyocyte induction, e.g. for optimising cardiomyocyte induction. Genes expressed in the cardiac cell-specific manner are useful for the targeted expression of genes encoding therapeutic proteins for the treatment of damaged heart tissue. Cardiac specific enhancer elements may be used for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     3588 aggcccccgcaccctcatcctggctcccgccccttctctccacctcccggacccctaa 3647
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         3648 aggggcggggggcccaagccgagggcgctgcgcctgaccccgagcggaagggccccagt 3707

Gaps between the contigs are represented as * runs of N. but the exact sives of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will * be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       * NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   75529 76028: gap of 100 bp 76029 116346: cont.iq of 40318 bp in length 116447 115446: gap of 100 bp 100 bp 115447 115158: cont.iq of 14812 bp in length 13.259 144702: cont.iq of 13344 bp in length.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                 mcsx/Mkx2.5 homology domains A1 + A2 and intervening sequence. The nucleic acid is useful for specifically expressing a gene in a cardiac cell, as an earlier marker of cardiomyocyte induction, e.g. for optimising cardiomyocyte induction. Genes expressed in the cardiac cell-specific manner are useful for the targeted expression of genes encoding therapeutic proteins for the treatment of damaged heart tissue. Cardiac specific enhancer elements may be used for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

                         nucleic acid is useful for specifically expressing a gene in a cardiac cell, as an earlier marker of cardiomyocyte induction, e.g. for optimising cardiomyocyte induction. Genes expressed in the cardiac cell-specific manner are useful for the targeted expression of genes encoding therapeutic proteins for the treatment of damaged heart tissue. Cardiac specific enhancer elements may be used for gene therapy.
The sequence represents the genomic sequence #1 of human Csx/Nkx2.5. The

                                                                                                                                                                                                                                                                                                                                                                    * NOTE: This is a 'working draft' sequence. It currently
* consists of 7 contigs. The true order of the pieces
* aris not known and their order in this sequence record is
* arbitrary Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence.

It currently rousists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             DB 2; Length 144702;

ALL36219 167830 kp DNA linear PkI 05-JAN-2031
Humas DNA sequence from clone PPII-14987 on chromosome 75, complete
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 the following abbreviations are used to associate primary accession
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        as follows. An attempt is made to resolve all Sequencina problems, such as compressions and repeats, but not necessarily within known annotated repeat sequence elements. Where the sequence is ambiguous, there is an annotation using the 'unsure' restare key.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Enis sequence has been finished according to sequence map criteria

Furing sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations to expediter with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission.

NOTE: This is a 'working draft' sequence. It currently consists of 13 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DO 1998 OF CHARGOT SANDE NEEDAMED FOR HEAR OF THE DATE OF THE PARTICIPATION OF THE COMPANIES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           QY 8-12                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              HIG.
